Re: Public Notice

**PUBLIC NOTICE FOR WATER CUSTOMERS OF BESSEMER TOWNSHIP WATER
SYSTEM**

Bessemer Township Department of Public Works (DPW) personal will be conducting a Water Line Service Inspection to determine the material used for the waterline (pipe) coming into the structure. This inspection will begin on January 17, 2024 and continue until completed, which should be within a couple of weeks. This inspection is to determine which houses have copper waterlines and which have iron or galvanized waterlines. This information will be used for the up-coming water projects to replace any lead service lines within the Township. While the Township has data on many houses that we know are serviced with copper waterlines, there are many we are not sure about, so, an in home inspection is necessary.

The inspection will be conducted by one of our DPW crew (Justin Niemi, Brenden Christoferson or Tyler Morrison) and engineering firm representative Dave Wannik, and they will be traveling in one of the red Bessemer Township pickup trucks.

Should you have any questions, please do not hesitate to contact me at the office 906-667-0423 or by my cell 906-285-2273. Thank you in advance for your cooperation and this opportunity to serve you.

Sincerely,

Jeffery C. Randall
Bessemer Township Supervisor
